Assessment of the Team alpha - group 14

> *In what state are you in? Why? What are obstacles to reach the next state? How have you improved during the course, and where is more improvement possible?*

The team is currently in the state *Performing*, which is the same one we were in during the last assignment. The team is working effectively and efficiently, with all the criterias provided to assess team state completely fulfilled for the states: *Seeded*, *Formed*, *Collaborating* and *Performing*. For instance, we are a performing team since we have consistently delivered on all past three assignments.

The team has been working in an Agile way, and has through constant knowledge-sharing been able to improve all members' capabilities throughout the course. In the first assignment we opted for more exotic new technologies, but during the course we learned that the team performed better when optimizing for technologies most in the team were familiar with before the start of the course.
Contexts have been rapidly changing, with new codebases each week. There have also been new assignments and new objectives, hence our team meets the criteria of adapting to changing contexts.

Room for improvement exists in our planning work. Our issues have been uneven in scope with a tendency to be broad and open for interpretation. With more experience we're certain that we'd be able to achieve a deeper and more thorough breakdown of individual tickets. The team has quickly adapted to the agile process during the assignments, with a more consistent issue breakdown happening in later projects.

The team is not yet in the state *Adjourned* since the criteria for that state is defined as;

1. *The team responsibilities have been handed over or fulfilled.*
2. *The team members are available for assignment to other teams.*
3. *No further effort is being put in by the team to complete the mission.*

In regards to criteria 1, our work is currently not fulfilled, and no team has taken over our work. For the context of this assignment, our issue being closed and/or the PR being merged, would qualify as the work being handed over or fulfilled. On the other hand, for criteria 2, one could argue that our team members are available for other teams, since we are all taking other courses. Although, that is not the spirit of the criteria, as a developer would typically only be in one team at once. Criteria 3 is also not met, since we are still, up until the review of this assignment, doing active development to complete the mission.
